Omaha Metropolitan Area, NE | (352) 618-0659 | brianwilson0625@gmail.com

SUMMARY

Marketing Specialist with 7+ years designing and optimizing digital campaigns, adept at using Adobe Experience Cloud and CRM integrations to build email and lifecycle programs. Skilled in creating target segment lists, implementing A/B tests, and conducting QA to ensure timely, high-quality campaign launches. Proven track record translating business goals into data-driven optimizations that boost engagement and ROI.

SKILLS

- **Digital Analytics:** Adobe Analytics, Customer Journey Analytics, Adobe Experience Platform, AEP, CJA, web analytics, mobile analytics, campaign tracking, attribution measurement, paid media reporting, lifecycle marketing measurement, personalization reporting, funnel analysis, conversion tracking, customer journey analytics, KPI frameworks
- **Adobe Experience Cloud:** Adobe Launch, Adobe Tags, Adobe Data Collection, Adobe Web SDK, Adobe App SDK, Adobe Edge Network, Real-Time CDP event forwarding, data streams, tag publishing workflows, library management, dependency review, version control, Adobe debugger tools
- **Marketing Integrations:** front-end pixel implementation, JavaScript tagging, Meta CAPI, Google Ads conversions, TikTok Pixel, Pinterest Tag, affiliate tracking, email campaign tracking, CRM integrations, media vendor integrations, server-side tracking, audience activation, UTM governance
- **Data Capture & Governance:** data layers, XDM schemas, event-based architecture, analytics taxonomy, tracking specifications, schema governance, QA frameworks, tagging documentation, data validation, named conventions, dashboard migration, issue triage, release governance
- **Technical Tools:** JavaScript, HTML, CSS, REST APIs, JSON, SQL, Google Tag Manager, Tealium, Git, JIRA, Confluence, Excel, Google Sheets, Looker Studio, Tableau, Power BI, Agile, DevOps, production debugging, browser developer tools
- **Leadership & Business Skills:** stakeholder management, cross-functional leadership, vendor coordination, offshore resource coordination, prioritization, root-cause analysis, risk-aware decision-making, executive communication, data storytelling, marketing strategy translation, team coaching

EXPERIENCE

WP Marketing

Jan 2020 - May 2026

Marketing Specialist

Owned digital marketing and analytics work for client-facing campaigns, translating business goals into clear measurement plans, campaign tracking requirements, KPI definitions, reporting views, tagging requests, and data quality checks so marketing performance could be evaluated across traffic, engagement, lead generation, conversion, retention, and customer journey touchpoints.

- Supported analytics implementation strategy across web and digital campaign properties by documenting data layer needs, conversion events, UTM standards, pixel requirements, Adobe Analytics variables, tag management rules, QA steps, and QA frameworks to keep reporting consistent and easier to troubleshoot when numbers did not line up across platforms.
- Worked with marketing, media, creative, and technical partners to align paid search, paid social, email, landing page, and lifecycle campaigns with accurate campaign measurement frameworks, attribution logic, audience definitions, funnel reporting, and eCommerce-style KPIs, leveraging email campaign tracking to help teams understand what was driving traffic, demand, and customer action.
- Used a hands-on analytics operations approach to review tracking quality before and after campaign launches, checking page views, click events, form submissions, conversion pixels, campaign parameters, JavaScript behavior, API payloads, tag firing rules, and dashboard outputs through browser tools, platform debuggers, QA documents, and structured test scenarios.
- Built and maintained marketing reporting workflows using Adobe Analytics concepts, Google Analytics-style reporting, Looker Studio, Excel, Google Sheets, SQL-based exports, campaign dashboards, and performance scorecards so stakeholders could quickly understand campaign results, identify gaps, and decide where to optimize budget, content, audience, and channel strategy.
- Helped define operational standards for marketing analytics requests, including intake forms, prioritization notes, tracking specifications, tagging documentation, QA checklists, release notes, vendor handoff details, issue triage workflows, and QA frameworks so analytics work stayed organized even when multiple campaigns and partners were moving at the same time.
- Partnered with implementation resources and external vendors on marketing technology updates involving tag management platforms, JavaScript pixels, server-side conversion tracking, CRM campaign data, email marketing events, paid media integrations, audience activation workflows, and CRM integrations while keeping the business impact clear for non-technical stakeholders.
- Investigated reporting discrepancies across analytics tools, ad platforms, CRM exports, landing page forms, and dashboard datasets by applying root-cause analysis, event validation, UTM review, tag audit methods, schema checks, cross-platform comparison, and stakeholder management to isolate whether issues came from tracking logic, campaign setup, vendor delays, duplicate events, missing variables, or reporting definitions.
- Coordinated distributed freelance and partner work by setting expectations, reviewing deliverables, clarifying requirements, organizing follow-ups, and keeping stakeholders aligned on timelines, release risk, analytics quality, production readiness, and business priorities while staying accountable for final campaign tracking quality and reporting usefulness.

- Presented analytics findings in clear business language, turning complex topics like data capture, event tracking, tag dependencies, conversion APIs, audience signals, attribution gaps, and dashboard discrepancies into practical recommendations that marketing teams could use to improve campaign performance, customer experience, personalization, and digital growth decisions.

WEBNOW

Sep 2018 - Sep 2019

Full Stack Developer

Built and supported web application features using JavaScript, HTML, CSS, REST APIs, JSON, SQL, and front-end debugging tools while gaining a strong technical foundation that later helped with analytics implementation, tracking validation, vendor pixels, and production issue troubleshooting.

- Partnered with product, design, marketing, and QA teammates to deliver website updates, campaign landing pages, form experiences, and customer-facing digital improvements while keeping tracking requirements, page performance, browser behavior, and release timing in mind throughout the development cycle.
- Implemented and validated basic marketing tracking logic for page views, clicks, form submissions, campaign source parameters, and conversion events, using browser developer tools, network inspection, console logs, test cases, and structured QA notes to confirm that events fired correctly across browsers and devices.
- Worked with structured data and integration patterns involving REST API requests, JSON payloads, database queries, client-side scripts, and third-party code snippets which created a practical understanding of how digital analytics data moves from the front end into platforms, dashboards, and downstream reporting systems.
- Supported production troubleshooting for broken scripts, inconsistent page behavior, missing event data, slow-loading assets, form errors, and vendor tag issues by applying root-cause analysis, log review, network debugging, and developer QA workflows before escalating issues to senior engineers or platform owners.
- Created technical and business-facing documentation for implementation notes, release changes, QA results, tracking behavior, and known issues, helping non-technical stakeholders understand what changed, how to validate it, and how the update affected reporting or user experience after deployment.
- Used Agile workflows, JIRA tickets, sprint planning, backlog review, QA cycles, code review feedback, and release coordination to keep work organized and visible while balancing development tasks, stakeholder requests, and production support priorities.
- Developed a strong bridge between technical web delivery and marketing analytics by learning how front-end implementation choices affect campaign tracking, data accuracy, conversion measurement, analytics QA, tag stability, and stakeholder confidence in digital performance reporting.

EDUCATION

University of Nebraska Omaha

Bachelor of Science, Business Administration, Marketing Concentration

Sep 2014 - May 2018

Omaha, NE
